Rev Fibrio Cambridge Mans, Feb. 6, 1882. Dankin: fri favoisstit og i profiter notes on the follow Lion of Lenne mina, and shauld be greatly obliged of you could favor me with any facts Concerning the order of development and the intervals between the matrinity of the stiffing and anthers of any &fe-Cies of the from four robbe in Torrug Bulletin, II, 11, Dan led to believe That you have probably trines donne of their since then. I du L'anin a I find on an average about 3 days between the pistil and the first clamen - Their further from the base of the fond, and four or five days beliveen The two cla meno - when the recons is nor sterile. Is onor this order frustruit; con-Dent in the genera demana and Korodela?, viz. Att clamen fronteer from the base frier. aug Hegelmaiero Jignes that thow amything the order of low This. What Can Hillman meanty the ofening and closing of The flowers opsprødela? (am. Nas. alob, 1881.897). Can't anderstand Row a demnattown ( ) Para Comment O man
